Parasuram Venkatesh

+91-9930599683

Ph.D. student, TIFR-CAM, Bengaluru, India
venkatesh2020@tifrbng.res.in
parasuramv.github.io
ORCID: 0009-0001-2681-1982

Research Interests

Nonlinear PDEs; hyperbolic conservation laws; shock stability; heterogeneous fluxes and nonlocal equations.

Education

Tata Institute of Fundamental Research – Centre for Applicable Mathematics — Bengaluru, India
Ph.D. in Mathematics; advisor: Shyam Sundar Ghoshal — August 2022–present
Expected completion: January–February 2027
M.Sc. in Mathematics — 2020–2022

Chennai Mathematical Institute — 2016–2019
B.Sc. (Honours) in Mathematics and Computer Science

Research Publications

Published articles

1. *Front Tracking for Scalar Conservation Laws with Spatially Heterogeneous Flux*. Sole author. *Indian Journal of Pure and Applied Mathematics* (2026). doi:10.1007/s13226-026-00975-x.
2. *A Non-Conservative, Non-Local Approximation of the Burgers Equation*, with Shyam Sundar Ghoshal and Emil Wiedemann. *Networks and Heterogeneous Media* **20**(4), 1061–1086 (2025). doi:10.3934/nhm.2025046.

Preprints

3. *Relative entropies and contraction up to shifts for a nonlocal Burgers equation*, with Nicola De Nitti and Shyam Sundar Ghoshal (2026). CVGMT preprint 8167.
4. *Failure of Uniqueness for Scalar Conservation Laws*, with Shyam Sundar Ghoshal and Abraham Sylla (2026). arXiv:2601.08771.
5. *L^2 Stability of Simple Shocks for Spatially Heterogeneous Conservation Laws*, with Shyam Sundar Ghoshal (2025). arXiv:2502.13687.

Research Software

- **Heterogeneous front tracking.** Python implementation of stationary-profile front tracking for multiplicative heterogeneous fluxes, including sign-changing coefficients. Closed-form event trajectories, coefficient-zero interfaces, diagnostics and explanatory notebooks accompany the analytical construction.
  github.com/parasuramv/heterogeneous-front-tracking
- **Scalar front tracking and random initial data.** Python solver for convex, concave and nonconvex scalar fluxes on the line and circle, with interactive notebooks and integral diagnostics. A companion Streamlit app provides replayable random-data Burgers experiments with boundary-flux mass and entropy diagnostics.
  github.com/parasuramv/scalar-front-tracking Live app: randomized-front-tracking.streamlit.app

Teaching Experience

Teaching Assistant, TIFR-CAM Graduate courses

- Advanced Functional Analysis August–December 2026; August–December 2024
- Advanced Partial Differential Equations January–April 2026
- Real Analysis August–December 2023; August–December 2022

Responsibilities included problem-set and examination design, grading, office hours, and individual and small-group problem discussions with cohorts of 8–12 students.

Talks and Selected Meetings

- *Failure of Uniqueness for Scalar Conservation Laws.* Invited talk (forthcoming), Conservation Laws: Theory, Numerics, and Scientific Computing, Indian Institute of Science, Bengaluru, 16–18 December 2026.
- *A Non-Conservative, Non-Local Approximation of the Burgers Equation.* Contributed talk, Mathematical Analysis of Fluid Flows by Variational Methods, Weierstrass Institute, Berlin, 29 September 2025 (meeting: 29 September–1 October).
- Poster presentation, Hyperbolic Problems in Nürnberg, Friedrich-Alexander-Universität Erlangen-Nürnberg, 24–26 September 2025.
- *L^2 Stability of Simple Shocks for Spatially Heterogeneous Conservation Laws.* Opening talk, TIFR-CAM In-house Symposium, Bengaluru, 18 September 2025 (meeting: 18–19 September).
- Participant, Horizons in Nonlinear PDEs, Universität Ulm, 26–30 September 2022.

Outreach

- *Blow-up for Hyperbolic Conservation Laws.* Pizza Talk, TIFR-CAM, 3 December 2025.
- *The Bolzano–Weierstrass Theorem.* SWIM 2025 lecture, Jawaharlal Nehru Planetarium, Bengaluru, 21 July 2025.

Technical Skills and Languages

Python, LaTeX, Lean, Git. Proficient in English and Hindi.
